

queueCTL: A Persistent CLI Job Queue

queueCTL is a robust, job queue system built in Java. It runs shell commands as background jobs, manages parallel workers, and gracefully handles failures with retries and a Dead Letter Queue (DLQ).

Tech Stack Used:

- **Java** - Core Programming Language
 - **picocli** - Type-safe CLI framework.
 - **Javalin** - Lightweight web framework for the dashboard.
 - **SQLite-JDBC** - File-based database engine.
 - **Jackson** - Fast JSON parsing library.
 - **Maven** - Build Tool

Working of queueCTL:

Build Project using Maven

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % mvn clean package
[INFO] Scanning for projects...
[INFO]
[INFO] -----
[INFO] Building queuectl 1.0.0
[INFO]   from pom.xml
[INFO] -----
[INFO] [ jar ] -----
[INFO] -----
[INFO] BUILD SUCCESS
[INFO] -----
[INFO] Total time:  3.198 s
[INFO] Finished at: 2025-11-12T13:22:11+05:30
[INFO] -----
```

Renaming to queuectl

● (base) chiragjogi@Chirags-MacBook-Air queuectl % alias queuectl="java -jar '/Users/chiragjogi/PES/Project/queuectl/target/queuectl-1.0.0.jar'"

Dashboard

```

Job Queues

Log of a job:

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl logs job-good
--- Logs for job-good ---

--- ATTEMPT 1 at Wed Nov 12 13:35:35 IST 2025 ---
Hello World!
```

Info of a job:

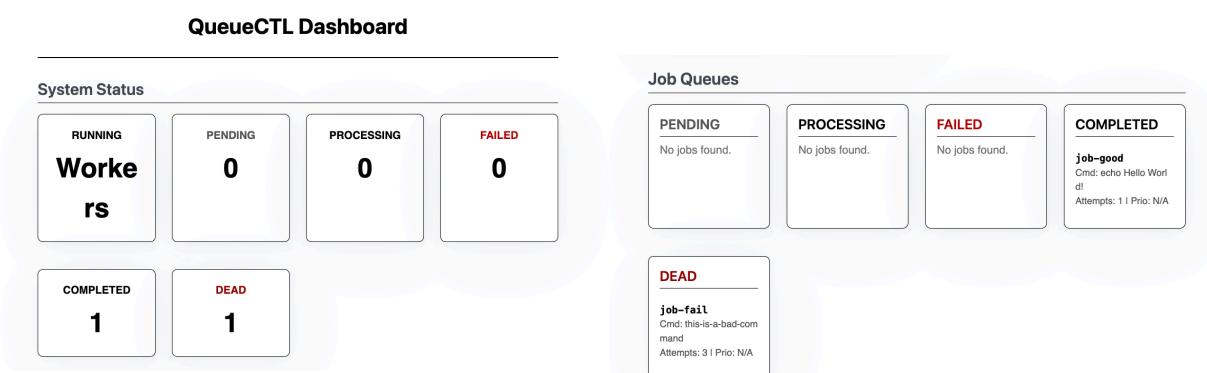

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl info job-good
--- Job Details ---
ID: job-good
State: COMPLETED
Command: echo Hello World!
Priority: 0
Attempts: 1 / 3
Timeout: 300 seconds
Created: 2025-11-12 13:35:35
Updated: 2025-11-12 13:35:35
--- Last Output ---
Hello World!
```

Configure retries and working of failed/dead:(Failed State - Automatic retries)

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl worker start --count 2
Starting 2 workers...
Workers started. Press Ctrl+C to stop.
[Worker pool-1-thread-2] Starting...
[Worker pool-1-thread-1] Starting...
[Worker pool-1-thread-2] Processing Job job-good: echo Hello World!
[Worker pool-1-thread-2] Job job-good COMPLETED
[Worker pool-1-thread-1] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-1] Job job-fail FAILED. Retrying in 200ms.
[Worker pool-1-thread-1] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-1] Job job-fail FAILED. Retrying in 400ms.
[Worker pool-1-thread-1] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-1] Job job-fail FAILED (Max retries). Moved to DLQ.
[]
```

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl config set max-retries 2
Config set: max-retries = 2
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id": "job-fail", "command": "this-is-a-bad-command"}'
Job enqueued with ID: job-fail
● (base) chiragjogi@Chirags-MacBook-Air queuectl %
```

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl dlq list
--- Jobs in DEAD state ---
ID: job-fail
Command: this-is-a-bad-command
Attempts: 3
Last Output: [ERROR] sh: this-is-a-bad-command: command not found
[ERROR] Exited with code 1...
```

DLQ retry:

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl dlq retry job-fail
Job job-fail has been requeued.
```

```
[Worker pool-1-thread-2] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-2] Job job-fail FAILED. Retrying in 2000ms.
[Worker pool-1-thread-1] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-1] Job job-fail FAILED. Retrying in 4000ms.
[Worker pool-1-thread-2] Processing Job job-fail: this-is-a-bad-command
[Worker pool-1-thread-2] Job job-fail FAILED (Max retries). Moved to DLQ.
```

Priority Enqueue:

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id":"clog-1", "command":"sleep 20"}'
queuectl enqueue '{"id":"clog-2", "command":"sleep 20"}'
Job enqueue with ID: clog-1
Job enqueue with ID: clog-2
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id":"job-low-prio", "command":"echo I am low priority"}'

Job enqueue with ID: job-low-prio
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id":"job-high-prio", "command":"echo I AM HIGH PRIORITY", "priority": 20}'
Job enqueue with ID: job-high-prio
○ (base) chiragjogi@Chirags-MacBook-Air queuectl %
```

Higher priority one was completed first even tho lower priority one was executed first.

```
[Worker pool-1-thread-1] Processing Job clog-1: sleep 20
[Worker pool-1-thread-2] Processing Job clog-2: sleep 20
[Worker pool-1-thread-1] Job clog-1 COMPLETED
[Worker pool-1-thread-2] Job clog-2 COMPLETED
[Worker pool-1-thread-1] Processing Job job-high-prio: echo I AM HIGH PRIORITY
[Worker pool-1-thread-2] Processing Job job-low-prio: echo I am low priority
[Worker pool-1-thread-1] Job job-high-prio COMPLETED
[Worker pool-1-thread-2] Job job-low-prio COMPLETED
```

Timeout:

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id":"job-timeout", "command":"sleep 20", "timeout": 2}'
Job enqueue with ID: job-timeout
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl logs job-timeout
--- Logs for job-timeout ---

--- ATTEMPT 1 at Wed Nov 12 13:59:13 IST 2025 ---
--- ATTEMPT 2 at Wed Nov 12 13:59:19 IST 2025 ---
--- ATTEMPT 3 at Wed Nov 12 13:59:27 IST 2025 ---

● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl info job-timeout
--- Job Details ---
ID: job-timeout
State: DEAD
Command: sleep 20
Priority: 0
Attempts: 3 / 3
Timeout: 2 seconds
Created: 2025-11-12 13:59:13
Updated: 2025-11-12 13:59:31
--- Last Output ---

[ERROR] Job timed out after 2 seconds.

█

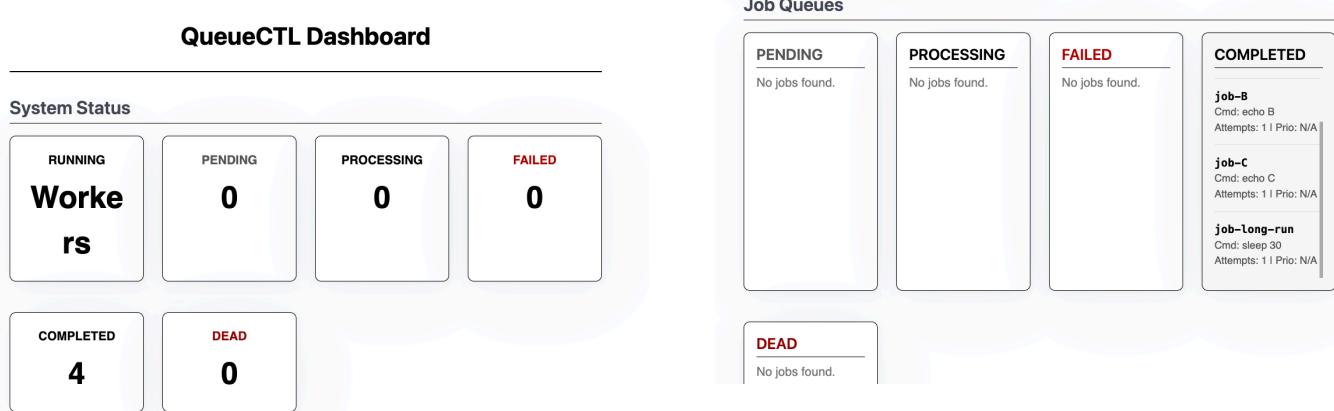

The image shows the QueueCTL Dashboard and Job Queues interface. The Dashboard has a 'System Status' section with four cards: 'RUNNING Workers' (3), 'PENDING' (0), 'PROCESSING' (0), and 'FAILED' (0). It also has 'COMPLETED' (3) and 'DEAD' (0) sections. The 'Job Queues' section shows four categories: 'PENDING' (No jobs found), 'PROCESSING' (No jobs found), 'FAILED' (No jobs found), and 'COMPLETED' (job-A, job-B, job-C). The 'DEAD' category also shows 'No jobs found'.

Processing State:

```
● (base) chiragjogi@Chirags-MacBook-Air queuectl % queuectl enqueue '{"id":"job-long-run", "command":"sleep 30"}'
Job enqueue with ID: job-long-run
○ (base) chiragjogi@Chirags-MacBook-Air queuectl % █
```

The image shows the QueueCTL Dashboard and Job Queues interface. The Dashboard has a 'System Status' section with four cards: 'RUNNING Workers' (3), 'PENDING' (0), 'PROCESSING' (1), and 'FAILED' (0). It also has 'COMPLETED' (3) and 'DEAD' (0) sections. The 'Job Queues' section shows four categories: 'PENDING' (No jobs found), 'PROCESSING' (job-long-run: sleep 30), 'FAILED' (No jobs found), and 'COMPLETED' (job-A, job-B, job-C). The 'DEAD' category shows 'No jobs found'. A log at the bottom shows the job being processed and completed.

```
[Worker pool-1-thread-1] Job job-C COMPLETED
[Worker pool-1-thread-1] Processing Job job-long-run: sleep 30
[Worker pool-1-thread-1] Job job-long-run COMPLETED
█
```
